run this code:

1. unzip the zip file.
2. open index.html

This is a summery of what we have done till now, and then we will detail what left.

Till now:

* we took a base code from: https://github.com/sdrdis/jquery.flowchart
* try to understand this 1000+ lines of code.
* create Nodes (by buttons) and connect them.
* a naive print (works only on 1 links per Node).
* add more functions to flowchart.js that will serve as later (print, create dictionaries, and more).

Left to do:
* Drag and Drop instead of Buttons.
* understanding the API that we need to work with.
* add more properties to Node. (label, inputs/outputs, data, etc).
* make a better print function (based on the API/Project demands).
